DOMBIVLI SHIKSHAN PRASARAK MANDAL’S,
K.V. PENDHARKAR COLLEGE OF ARTS, SCIENCE AND
COMMERCE(AUTONOMOUS), DOMBIVLI (EAST), DIST. THANE
(Affiliated to University of Mumbai)

Faculty of Science
DEPARTMENT OF BOTANY
(Programme: Bachelor of Science: B.Sc.)

SYLLABUS FOR
F.Y.B.Sc. – BOTANY (Semester I and II)
Choice Based Credit System (CBCS)
(with effect from Academic Year: 2021-22)
FACULTY OF SCIENCE
DEPARTMENT OF BOTANY
PROGRAMME: BACHLOR OF SCIENCE (B.Sc.)
F.Y. B.Sc.
Semester I and II Paper I and II
Syllabus w.e.f Academic Year 2021-22
Course Outcomes: On completion of this course the student would be able to: CO1: Gain knowledge about the general characters of division Chlorophyta and Cyanophyta (i.e. and its economic importance) and to understand the systematic position, life cycle of Spirogyra and Nostoc. CO2: Know economic importance of Algae with respect to Chlorophyta and Cyanophyta. CO3: Understand the life cycle of Rhizopus and Aspergillus and to learn the mode of nutrition in Fungi especially Saprophytism and Parasitism. CO4: Understand the general characters of Class Hepaticae and the systematic position, structure, life cycle of Riccia.

Course Outcomes: On completion of this course the student would be able to: CO1: Understand general structure of plant cell. CO2: Gain knowledge about ultrastructure, composition and functions of various plant cell organelles such as cell wall, Nucleus and chloroplast. CO3: Learn about energy pyramids and how energy flows in an ecosystem. CO4: Acquire knowledge about terrestrial and aquatic ecosystem. Importance of urban water bodies for ecosystem. CO5: Have an understanding about phenotype and genotype and to understand mendelian genetics monohybrid, dihybrid; test cross; back cross ratios. Concept of Karyotype CO6: Introduction of Biostatistics with reference to mean, mode, median, standard deviation and frequency distribution.

</tbody>
</table>
Course Outcomes: On the completion of the course the student would be able to: CO1: Identify and describe the morphological and anatomical characteristics of Nostoc and Spirogyra. CO2: Describe the economic importance of Algae. CO3: Develop an understanding of economic importance of fungi along with the demonstration skills in laboratory, field and glasshouse work related to mycology and develop an understanding of fungi like Rhizopus and Aspergillus. CO5: Demonstrate an understanding of antheridia, archegonia, and sporophyte of Bryophytes using Riccia as a specimen

On the completion of the course the student would be able to: CO1: Examine various stages of mitosis in root tip cells of Allium. CO2: Demonstrate and identify cell inclusions such as concentric and eccentric type of starch grains, Aleurone layer, Cystolith, Raphides and Sphaeraphides. CO3: Identify various plant cell organelles such Plastids: Chloroplast, Amyloplast, Endoplasmic Reticulum and Nucleus with the help of photomicrograph. CO4: Observe and learn about different types of ecological adaptations through specimens of Pistia/Eichhornia, Nymphaea, Hydrilla, Typha/Cyperus, Opuntia, Nerium, Avicennia pneumatophore. CO5: Develop the skills of statistics by calculating mean, median, mode and standard deviation. CO6: Understand about Frequency distribution, graphical representation of data- frequency polygon, histogram, and pie chart. CO7: Learn about Karyotype of normal male, female and Allium cepa.

material and permanent slides.

| 7 | Early blight of Potato / Tomato (Identification only) |
| 8 | Economic importance of Phycomycetes |
| 9 | Life cycle of *Riccia* from fresh/preserved material. |
| 10 | Economic importance of hepaticae |

**PRACTICAL PAPER II- FORM AND FUNCTION I**

| 1 | Cell inclusions: Starch grains (Potato and Rice); Aleurone Layer (Maize) |
| 2 | Cystolith (*Ficus*); Raphides (*Pistia*); Sphaeraphides (*Opuntia*). |
| 3 | Identification of cell organelles with the help of photomicrograph: Chloroplast and Nucleus |
| 4 | Identification of plants adapted to different environmental conditions: Hydrophytes: Floating, Free floating (*Pistia/Eichhornia*); Rooted floating (*Nymphaea*); Submerged (*Hydrilla*) |
| 5 | Mesophytes (Sunflower/Vinca/Maize); Hygrophytes (*Typha/Cyperus*) |
| 6 | Xerophytes: Succulent (*Opuntia*); Woody Xerophyte (*Nerium*); Halophyte (*Avicennia* pneumatophore) No sections in ecology, only identification and description of specimens. Morphological adaptations only. |
| 7 | Study of various stages of Mitosis using Onion root tip |
| 8 | Calculation of mean, median and mode. |
| 9 | Calculation of standard deviation. |
| 10 | Frequency distribution, graphical representation of data-frequency polygon, histogram, pie chart. |
| 11 | Study of karyotypes in plants and Human |
| 12 | Field Report (One day botanical excursion) |
**F.Y.B.Sc. Semester- II**  
**Botany-I**  
**Course Code: PCUSBOI21-211 Credit: 02**

**Course Outcomes:** The student would be able to: CO1: Understand life cycle, the systematic position and alternation of generations in Nephrolepis. CO2: Learn the Stelar evolution in Pteridophytes. CO3: Know life cycle, the systematic position and alternation of generations of Cycas as well as to know economic importance of Gymnosperm. CO4: Develop critical understanding on morphology of leaf, flower and Inflorescence. CO5: Identify, classify and describe the characteristics of Families Leguminosae (Fabaceae, Caesalpinae, Mimosae), Combretaceae and Amaryllidaceae.

2. Combretaceae
3. Amaryllidaceae
**Botany-II**

Course Code: **PCUSBOI21-212** Credit: 02

**Course Outcomes:** The student would be able to: CO1: Learn about simple and complex plant tissues. CO2: Gain knowledge of primary structure of dicot and monocot root, stem and leaf and to identify types of epidermal hair, monocot and dicot stomata and learn about epidermal tissue system. CO3: Have an understanding of Light reactions, photolysis of water, cyclic and non cyclic photophosphorylation, C3, C4 and CAM pathways involved in the process of photosynthesis. CO4: Get familiar with the concept of primary and secondary metabolites, difference between primary and secondary metabolites. CO5: Introduction to AYUSH, Ayurveda and Tridosha. Know about botanical source, part of the plant used, active constituents present and medicinal uses of plants of grandma's pouch using examples of *Ocimum sanctum*, *Adathoda vasica*, *Zinziber officinale*, *Curcuma longa*, *Terminalia bellarica*, *Emblica officinalis* and *Azadiracta indica*. Concept of Nutraceutical Science with introduction, scope and applications

**Course Outcomes:** On the completion of the course the student would be able to: CO1: Demonstrate an understanding of Pteridophytes through the study of life cycle, the systematic position and alternation of generations in Nephrolepis. CO2: Develop critical understanding on morphology, anatomy and reproduction of Gymnosperms like Cycas. CO3: Develop critical understanding on morphology of leaf and inflorescence through study of common plant of nearby locality. CO4: To identify, classify and describe the characteristics of Families Leguminosae (Fabaceae, Caesalpinae, Mimosae), Combretaceae and Amaryllidaceae

On the completion of the course the student would be able to: CO1: Demonstrate and learn about primary structure of monocot and dicot root, stem and stomata. CO2: Understand about unicellular, multicellular, glandular, Peltate, Stellate and T-shaped epidermal outgrowths in plants. CO3: Develop the skills of chromatography by performing separation of chlorophyll pigments and amino acids in laboratory. CO4: Perform of the colour of anthocyanin changes with the change in pH. CO5: Test the amount of tannins from tea powder or Acacia catechu. CO6: Identify various plants of grandma’s pouch.

Concept of Meiosis and its various stages  
Difference between mitosis and meiosis                                                                                                               |               |
| II   | **CYTOGENETICS**                                                                                                                                                                                                    | 15            |
| 2.1  | Variation in Chromosome structure (Chromosomal Aberrations)  
Definition, Origin, Cytological and Genetic Effects of the following: Deletions, Duplications, Inversions and Translocations.                                                                                 |               |
| 2.2  | Concept of Mutation, Hugo de Vries theory (Mutation theory)  
Types of mutations: Spontaneous Mutations and Induced Mutations  
Point Mutations and its types i.e. Missense, Nonsense, Silent and Neutral                                                                                       |               |
| 2.3  | Extranuclear Genetics  
Streptomycin resistance in *Chlamydomonas*  
Male sterility in maize and Plastid Inheritance in *Mirabilis jalapa*                                                                                           |               |
| III  | **MOLECULAR BIOLOGY**                                                                                                                                                                                               | 15            |
| 3.1  | DNA replication: Modes of Replication  
Meselson and Stahl Experiment                                                                                                                                 |               |
| 3.2  | DNA replication in prokaryotes and eukaryotes: enzymes involved and molecular mechanism of replication                                                                                                              |               |
| 3.3  | Protein Synthesis: Central dogma of Protein synthesis  
Transcription in prokaryotes and eukaryotes: promoter sites, Initiation, Elongation and Termination.                                                                                                                  |               |

### Course Outcome

1. Understanding the secondary growth structure and types of vascular bundles of dicot and monocot stem and root.
2. Mechanical tissue system
3. Concept of vascular bundle and its types
4. Physiological cycles such as Glycolysis, ETS and TCA
5. Concept of vernalization
6. Study of biogeochemical cycles such as Carbon, Phosphorus, Sulphur and Water
7. Concept of ecological factors
8. Soil pollutants with reference to synthetic fertilizers

### Learner’s space:

- Knowing the process and need of secondary growth in plant, mechanical tissue system and vascular bundles functions in plants
- Understand various physiological and biogeochemical cycles
- Understand ecological factors and their applications
- Use of soil pollutants in relation with pesticides

### Evaluation Pattern

**F.Y.B.Sc. Botany Practical Examination (Both semesters)**

| 1. | Practical Paper I (Experiments + Viva + Journal) | 50 Marks |
| 2. | Practical Paper II (Experiments + Viva + Journal + Field report) | 50 Marks |
No. UG/ 36 of 2019-20

Attention of the Principals of the Affiliated Colleges and Directors of the recognized Institutions in Science & Technology Faculty is invited to this office Circular No. UG/95 of 2015-16, dated 5th October, 2015 relating to the revised syllabus as per (CBSGS) for the T.Y.B.Sc. Botany (Sem. V & VI).

They are hereby informed that the recommendations made by the Board of Studies in Botany at its meeting held on 18th March, 2019 have been accepted by the Academic Council at its meeting held on 10th May, 2019 vide item No. 4.26 and that in accordance therewith, the revised syllabus as per the (CBCS) for the T. Y. B.Sc. Botany in (Sem. V & VI) has been brought into force with effect from the academic year 2019-20, accordingly. (The same is available on the University’s website www.mu.ac.in).

MUMBAI – 400 032

03rd July, 2019

To

The Principals of the affiliated Colleges and Directors of the recognized Institutions in Science & Technology Faculty. (Circular No. UG/334 of 2017-18 dated 9th January, 2018.)

A.C./4.26/10/05/2019

***************

No. UG/ 36 -A of 2019 MUMBAI-400 032

3rd July, 2019

Copy forwarded with Compliments for information to:-

1) The I/e Dean, Faculty of Science & Technology,
2) The Chairman, Board of Studies in Botany,
3) The Director, Board of Examinations and Evaluation,
4) The Professor-cum-Director, Institute of Distance and Open Learning (IDOL),
5) The Director, Board of Students Development,
6) The Co-ordinator, University Computerization Centre,s

(Dr. Ajay Deshmukh)
REGISTRAR
UNIVERSITY OF MUMBAI

Syllabus for the T.Y.B.Sc.
Program: B.Sc. Course: BOTANY

(Credit Based Semester and Grading System with effect from the academic year 2019–2020)
T.Y.B.Sc. Botany Syllabus  
Restructured for Credit Based and Grading System  
To be implemented from the Academic year 2019-2020

BSc BOTANY: PROGRAM OUTCOMES

Specific core discipline knowledge
- Students can recall details and information about the evolution, anatomy, morphology, systematics, genetics, physiology, ecology, and conservation of plants and all other forms of life.
- Students can recall details of the unique ecological and evolutionary features of the local and Indian flora.

Communication skills
- Students can communicate effectively using oral and written communication skills

Problem solving and research skills
- Students can generate and test hypotheses, make observations, collect data, analyze and interpret results, derive conclusions, and evaluate their significance within a broad scientific context

BSc BOTANY: PROGRAM SPECIFIC OUTCOMES

- To recognize and identify major groups of non-vascular and vascular plants and their phylogenetic relationships.
- To understand the phylogeny of plants and study various systems of classification.
- To explore the morphological, anatomical, embryological details as well as economic importance of algae, fungi, bryophytes, pteridophytes, gymnosperms and angiosperms.
- To understand physiological processes and adaptations of plants.
- To provide knowledge about environmental factors and natural resources and their importance in sustainable development.
- To be able to carry out phytochemical analysis of plant extracts and application of the isolated compounds for treatment of diseases.
- To be able to deal with all microbes and the technologies for their effective uses in industry and mitigation of environmental concerns.
- To explain how current medicinal practices are often based on indigenous plant knowledge and to get introduced to different perspectives on treating ailments according to ethnomedicinal principles.
- To understand patterns of heredity and variation among individuals, species and populations and apply principles for improvement of quality and yield.
- To be able to apply statistical tools to gain insights into significantly different data from different sources.
- To acquire recently published knowledge in molecular biology, such as rDNA technology; PTC and bioinformatics and their applications.
SEMESTER V
THEORY

<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>USBO501</td>
<td>PLANT DIVERSITY – III</td>
<td>2.5 Credits</td>
</tr>
</tbody>
</table>

**Course outcomes:**

The students would be able:

- To gain knowledge about microbial diversity and techniques for culturing and visualization.
- To understand the salient features of three major groups of algae, their life cycle patterns with a suitable example; to be able to identify them.
- To learn the general characteristics and classification of two major groups of fungi along with life cycles of each group; to be able to identify them.
- To understand the scope and importance of Plant Pathology and apply the concepts of various control measures of commonly widespread plant diseases.

**Unit I: Microbiology**

- **Types of Microbes:** Viruses, Bacteria, Algae, Fungi, Protozoa, Mycoplasma and Actinomycetes.
- **Culturing:** Sterilization, media, staining, colony characters.
- Pure cultures

**Unit II: Algae (G.M. Smith Classification System to be followed)**

- Division Rhodophyta: Classification and General Characters: Distribution, Cell structure, pigments, reserve food, range of thallus, reproduction: asexual and sexual, Alternation of Generations, Economic Importance.
- Structure, life cycle and systematic position of *Polysiphonia, Batrachospermum*.
- Structure, life cycle and systematic position of *Vaucheria*.
- Structure, life cycle and systematic position of *Pinnularia*.

**Unit III: Fungi (G.M. Smith Classification System to be followed)**

- Basidiomycetes: Classification and General characters
  - Life cycle of *Agaricus*
  - Life cycle of *Puccinia*
- Deuteromycetae: Classification and General Characters
- Life cycle of *Alternaria*
<table>

</tr>
<tr>
<td>Course Code</td>
</tr>
<tr>
<td>-------------</td>
</tr>
<tr>
<td>USBO502</td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

**Course outcomes:**

The students would be able:

- To acquire knowledge of different fossil forms and understand their role in evolution.
- To provide plant description, describe the morphological and reproductive structures of seven families and also identify and classify according to Bentham and Hooker’s system.
- To gain proficiency in the use of keys and identification manuals for identifying any unknown plants to species level.
- To relate anomalies in internal stem structure with function and appreciate the salient features of the root stem transition zone.
- To get exposure to pollen study and learn to apply it in various fields.

**Unit I: Paleobotany**

- *Lepidodendron* – All form genera root, stem, bark, leaf, male and female fructification.
- *Lyginopteris* – All form genera root, stem, leaf, male and female fructification.
- *Pentoxylon* – All form genera.
- Contribution of Birbal Sahni, Birbal Sahni Institute of Paleobotany, Lucknow

**Unit II: Angiosperms I**

- Morphology of flower – All Parts of Flower.
- Complete classification of Bentham and Hooker (only for prescribed families), Merits and demerits
- Bentham and Hooker’s system of classification for flowering plants up to family with respect to the following prescribed families and economic and medicinal importance for members of the families. (Special stress on fruit morphology to be given)
  - Capparidaceae
  - Umbelliferae
  - Cucurbitaceae
  - Rubiaceae
  - Solanaceae
  - Commelinaceae
  - Graminaceae

**Unit III: Anatomy I**

- **Anomalous secondary growth** in the Stems of *Bignonia, Salvadoria, Achyranthes, Dracaena*. Storage roots of Beet, Radish
- **Root stem transition**
- **Types of Stomata** – Anomocytic, Anisocytic, Diacytic, Paracytic, and Graminaceous

<tr>
<td>USBO503</td>
<td>FORM AND FUNCTIONS- II</td>
</tr>
</tbody>
</table>

**Course outcomes:**

- The students would be able:
  - To acquire knowledge about two important organelles and molecular mechanisms of translation
  - To understand water relations of plants, inorganic and organic solute transport, and apply the knowledge to manage mineral nutrition and survival in challenging abiotic stresses.
  - To understand succession in plant communities and study remediation technologies in order to apply knowledge acquired for cleanup of polluted sites.
  - To get exposure to principles and techniques of plant tissue culture and apply these studies for improving agriculture and horticulture and to become an entrepreneur.

**Unit I: Cytology and Molecular Biology**

- Structure and function of nucleus
- Structure and function of vacuole
- Structure and function of giant chromosomes
- The genetic code: Characteristics of the genetic code
- Translation in Prokaryotes and Eukaryotes.

**Unit II: Plant Physiology I**

- Water relations: Potential, osmosis, transpiration, imbibition,
- Solute transport: Transport of ions across cell membranes, active and passive transport, carriers, channels and pumps.
- Translocation of solutes: Composition of phloem sap, girdling experiment.
- Pressure flow model (Munch’s hypothesis): Phloem loading and unloading, anatomy of sieve tube elements and mechanisms of sieve tube translocation.
- Mineral Nutrition: Role of Macro and Micro nutrients, physiological functions and deficiency symptoms.

**Unit III: Environmental Botany**

- Bioremediation: Principles, factors responsible and microbial population in bioremediation.
- Phytoremediation: Metals, Organic pollutants

**Unit IV: Plant Tissue Culture**

- Aspects of Micro-propagation with reference to Floriculture: Detailed study of Orchid Cultivation
- Plant cell suspension cultures for the production of secondary metabolites: With special reference to Shikonin production.
- Somatic Embryogenesis and Artificial Seeds.
- Protoplast Fusion and Somatic Hybridization: i) Concept, Definition, and various methods of Protoplast Fusion ii) Applications of Somatic Hybridization in Agriculture
Course Code | Title | Credits
---|---|---
USBO504 | CURRENT TRENDS IN PLANT SCIENCES – II | 2.5 Credits (60 Lectures)

**Course outcomes:**
The students would be able:
- To get exposure to the technique of mushroom cultivation and explore the possibility of entrepreneurship in the same.
- To learn ethnobotanical principles, applications and utilize indigenous plant knowledge for the cure of common human diseases and improvement of agriculture.
- To gain knowledge about the latest molecular biology techniques for isolation and characterization of genes.
- To learn principles and application of commonly used techniques in instrumentation.
- To gain proficiency in the monograph study and pharmacognostic analysis of six medicinal plants.

**Unit I: Ethnobotany and Mushroom Industry**
- **Ethnobotany**- Definition, history, sources of data and methods of study.
- **Applications of ethnobotany:**
  - Ethno-medicines.
  - Agriculture.
  - Edible plants.
- **Traditional medicines** used by tribals in Maharashtra towards
  - Skin ailments: *Rubia cordifolia, Sandalwood*
  - Liver ailments: *Phyllanthus, Andrographis*
  - Wound healing and ageing: *Centella, Typha, Terminalia, Tridax.*
  - Fever: *Vitex negundo, Tinospora cordifolia leaves*
  - Diabetes: *Momordica charantia, Syzygium cumini*
- **Mushroom industry:**
  - Detail general account of production of mushrooms with respect to methods of Composting, spawning, casing, harvesting of mushroom. Cultivation of *Pleurotus, Agaricus, Volvariella* mushroom.
  - General account of mushrooms: Nutritional value, picking and packaging, economic importance.

(15 lectures)

**Unit II: Plant Biotechnology I**
- Construction of genomic DNA libraries, Chromosome libraries and c-DNA libraries.
- Identification of specific cloned sequences in c-DNA libraries and Genomic libraries.
- **Analysis of genes and gene transcripts** –Restriction enzyme, analysis of cloned DNA sequences. Hybridization(Southern Hybridization)

(15 lectures)

**Unit III: Instrumentation**
- **Colorimetry and Spectrophotometry** (Visible, UV and IR) – Instrumentation, working, principle and applications.
- **Chromatography:** General account of Column chromatography. Principle and bedding material involved in adsorption and partition chromatography, ion exchange chromatography, molecular sieve chromatography.

- Graminaceae

- Morphological peculiarities and economic importance of the members of the above-mentioned Angiosperm families
- Identifying the genus and species of a plant with the help of Flora

### Anatomy I

- Study of anomalous secondary growth in the stems of the following plants using double staining technique.
  1) *Bignonia*
  2) *Salvadora*
  3) *Achyranthes*
  4) *Dracaena*
- Study of anomalous secondary growth in the roots of
  1) Beet
  2) Radish
- Types of Stomata
  1) Anomocytic
  2) Anisocytic
  3) Diacytic
  4) Paracytic
  5) Graminaceous

### Palynology I

- Study of pollen morphology (NPC Analysis) of the following by Chitale’s Method
  - *Hibiscus*
  - *Datura*
  - *Ocimum*
  - *Crinum*
  - *Pancratium*
  - *Canna*
- Determination of pollen viability
- Pollen analysis from honey sample – unifloral and multifloral honey
- Effect of varying concentration of sucrose on *In vitro* Pollen germination

| Total Credit | 3 |
Semester V USBOP6 – For 6 Units

Semester V USBOP7 – For 3 Units

PRACTICAL – PAPER III FORM AND FUNCTION II USBOP 503 (For 3 & 6 Units) 1.5

Cytology and Molecular Biology
- Mounting of Giant chromosomes from *Chironomous* larva
- Smear preparation from *Tradescantia* buds
- Predicting the sequence of amino acids in the polypeptide chain that will be formed following translation (Eukaryotic)

Plant Physiology I
- Estimation of Phosphate phosphorus (Plant acid extract)
- Estimation of Iron (Plant acid extract)

Note: Preparation of a standard graph and determination of the multiplication factor for Phosphate / Iron estimation using a given standard phosphate / standard Iron solution should be done in regular practical as this will also be put as a question in practical exam

Environmental Botany
- Estimation of the following in given water sample
  - Dissolved oxygen demand
  - Biological oxygen demand
  - Hardness
  - Salinity and Chlorinity

Micropropogation
- Plant Tissue culture:
  - Identification – Multiple shoot culture, hairy root culture, somatic embryogenesis
  - Preparation of stock solutions for preparation of MS medium

(Note: Concept of preparation of specified molar solutions should be taught and problems based on preparation of stock solutions for tissue culture media will be given).

Semester V USBOP6 – For 6 Units

PRACTICAL – PAPER IV CURRENT TRENDS IN PLANT SCIENCES II USBOP 504 (For 6 Units) 1.5

Ethnobotany and mushroom industry
- Study of plants mentioned in theory for Ethnobotany
- Mushroom cultivation (To be demonstrated)
- Identification of various stages involved in mushroom cultivation – spawn, pin head stage, mature/ harvest stage of *Agaricus, Pleurotus, Volvariella*

Biotechnology I
- Growth curve of E. coli
- Plasmid DNA isolation and Separation of DNA using AGE
- Restriction mapping (problems), Southern blotting

Instrumentation
- Demonstration of Beer Lambert’s Law
- Experiment based on ion exchange chromatography for demonstration
- Experiment based on separation of dyes/plant pigments using silica gel column.

**Course outcomes:**

The students would be able:

- To identify, describe and study in detail the life cycles of three Bryophytes.
- To and study in detail classification and general characters of three classes of Pteridophytes and identify as well as describe the life cycles of one example from each class.
- To study evolutionary aspects and economic utilization of Bryophytes and Pteridophytes.
- To identify, describe and study in detail the life cycles of three Gymnosperms.

**Unit I: Bryophyta (G. M. Smith Classification system to be followed)**

- Life cycle of *Marchantia*
- Life cycle of *Pelia*
- Life cycle of *Sphagnum* (15 lectures)

**Unit II: Pteridophyta (G. M. Smith Classification System to be followed)**

- Lepidophyta – Classification, general characters; Life cycle of *Lycopodium*
- Calamophyta – Classification, general characters; Life cycle of *Equisetum*
- Pterophyta - Classification, general characters; Life cycle of *Adiantum* and *Marselia* (15 lectures)

**Unit III: Bryophytes and Pteridophytes: Applied aspects**

- Ecology of Bryophytes.
- Economic importance of Bryophytes.
- Bryophytes as Indicators.
- Evolution of Sporophyte and Gametophyte in Bryophytes.
- Economic importance of Pteridophytes
- Diversity and distribution of Indian Pteridophytes
- Types of Sori and Evolution of Sori in Pteridophytes (15 lectures)

**Unit IV: Gymnosperms (Chamberlain’s Classification System to be followed)**

- Life cycle of *Thuja*.
- Life cycle of *Gnetum*
- Life cycle of *Ephedra*.
- Economic importance of Gymnosperms (15 lectures)

<td>USBO602</td>
<td>PLANT DIVERSITY – IV</td>
<td>2.5 Credits</td>
</tr>
</tbody>
</table>

**Course outcomes:**

The students would be able:

- To study contribution of Botanical gardens, BSI to Angiosperm study and provide plant description, describe the morphological and reproductive structures of seven families.
- To gain exposure to a phylognetic system of classification.
- To gain insight into the anatomical adaptations of different ecological plant groups.
- To understand development plant of male and female gametophytes, embryonic structure and development.
- To understand the different aspects and importance of Biodiversity and utilize them for conservation of species so as to prevent further loss or extinction of Biodiversity and preserve the existing for future generations.

**Unit I: Angiosperms II**

- **Major Botanic gardens of India** – Indian Botanic Garden, Howrah; National Botanic Garden (NBRI) Lucknow; Lloyd Botanic Garden, Darjeeling; Lalbaugh Botanic Garden, Bangaluru.
- Botanical survey of India and regional branches of India
- Bentham and Hooker’s system of classification for flowering plants up to family with respect to the following prescribed families and economic importance, medicinal importance and fruit morphology for members of the families
  - Rhamnaceae
  - Combretaceae
  - Asclepiadaceae
  - Labiatae
  - Euphorbiaceae
  - Cannaceae
- Hutchinson’s classification system of Angiosperms Brief Introduction, Merits and Demerits of Hutchinson’s Classification System

**Unit II: Anatomy II**

- Ecological anatomy
  - Hydrophytes – submerged, floating, rooted
  - Hygrophytes -Typha
  - Mesophytes
  - Sciophytes
  - Halophytes
  - Epiphytes
  - Xerophytes

**Unit III: Embryology**

- Microsporogenesis
- Megasporogenesis- Development of monosporic type, examples of all embryo sacs
- Types of ovules
- Double fertilization
- Development of embryo—Capsella

(15 lectures)
Unit IV: Plant Geography (Shifted from Paper – IV)

- **Phytogeographical regions of India.**
- **Biodiversity:**
  - Definition, diversity of flora found in various forest types of India
  - Levels of biodiversity
  - Importance and status of biodiversity
  - Loss of biodiversity
  - Conservation of biodiversity
  - Genetic diversity- Molecular characteristics

(15 lectures)
Course Code | Title | Credits
---|---|---
USBO603 | FORMS AND FUNCTION – III  
60 Lectures) | 2.5 Credits

Course outcomes:
The students would be able:
- To study various plant biomolecular structures and appreciate the structures, role, functions and applications of enzymes.
- To gain insight into the Nitrogen and plant hormone metabolism with applications of the same in agriculture and horticulture.
- To understand principles of genetic mapping, mutations and solve problems based on them, gain knowledge of various metabolic disorders and their implications.
- To generate and test hypotheses, make observations, collect data, analyze and interpret results, derive conclusions, and evaluate their significance within a broad scientific context, using suitable statistical techniques.

Unit I: Plant Biochemistry
- **Structure of biomolecules**: Carbohydrates (sugars, starch, cellulose, pectin, lipids (fatty acids and glycerol), proteins (amino acids)
- **Enzymes**: Nomenclature, classification, mode of action, Enzyme kinetics, Michaelis-Menten equation, competitive, non-competitive and un-competitive inhibitors.

(15 lectures)

Unit II: Plant Physiology II
- **Nitrogen Metabolism**: Nitrogen cycle, root nodule formation, and leghaemoglobin, nitrogenase activity, assimilation of nitrates, (NR, NiR activity), assimilation of ammonia, (amination and transamination reactions), nitrogen assimilation and carbohydrate utilization.
- Physiological effects and commercial applications of Auxins, Gibberellins, Cytokinins and Abscisic acid

(15 lectures)

Unit III: Genetics
- **Genetic mapping in eukaryotes**: discovery of genetic linkage, gene recombination, construction of genetic maps, three-point crosses and mapping chromosomes, problems based on the same
- **Gene mutations**: definition, types of mutations, causes of mutations, induced mutations, the Ame’s test
- **Metabolic disorders**: enzymatic and non-enzymatic: Gene control of enzyme structure Garrod’s hypothesis of inborn errors of metabolism, Phenyl ketone urea.

(15 lectures)

Unit IV: Biostatistics (Shifted from Paper – II)
- Test of significance student’s t-test – Paired and Unpaired.
- Regression.
- ANOVA (one way).

(15 lectures)

</tbody>
</table>

**Course outcomes:**

- The students would be able:
  - To gain insight into recent molecular biology techniques for DNA analysis and amplification and Barcoding techniques and applications therein.
  - To understand and apply tools of Bioinformatics for data retrieval and phylogenetic analysis.
  - To learn about the sources of economically important plants in the field of fats and oils and apply it for extraction, dealing with entrepreneurship in the field.
  - To gain knowledge and proficiency in preservation of post harvest produce and explore the possibility of entrepreneurship in the field.

**Unit I: Plant Biotechnology II**

- **DNA sequence analysis** – Maxam – Gilbert Method and Sanger’s method, Pyro Sequencing.
- Polymerase Chain Reaction (PCR).
- **DNA barcoding**: Basic features, nuclear genome sequence, chloroplast genome sequence, rbcL gene sequence, mat K gene sequence, present status of barcoding in plants.

**Unit IV: Bioinformatics (Shifted from Paper – III)**

- Organization of biological data, databases
- Exploration of data bases, retrieval of desired data, BLAST.
- Protein structure analysis and application
- Multiple sequence analysis and phylogenetic analysis

**Unit III: Economic Botany**

- **Essential Oils**: Extraction, perfumes, perfume oils, oil of Rose, Sandalwood, Patchouli, Champaca, grass oils: Citronella, Vetiver.
- **Fatty oils**: Drying oil (Linseed and Soyabean oil), semidrying oils (Cotton seed, Sesame oil) and non-drying oils (Olive oil and Peanut oil).
- **Vegetable Fats**: Coconut and Palm oil

**Unit IV : Post Harvest Technology**

- **Storage of Plant Produce** – Preservation of Fruits and Vegetables
  - Drying (Dehydration) – Natural conditions – Sun drying, Artificial Drying – Hot Air Drying, Vacuum Drying, Osmotically Dried Fruits, Crystallized or Candied Fruits, Fruit Leather, Freeze Drying
  - Freezing (Cold Air Blast System, Liquid Immersion method, Plate Freezers, Cryogenic Freezing, Dehydro-Freezing, Freeze Drying).
  - Canning
  - Pickling (in Brine, in Vinegar, Indian Pickles)
  - Sugar Concentrates (Jams, Jellies, Fruit juices)
  - Food Preservatives
  - Use of Antioxidants in Preservation

(15 lectures)

- Students offering Double major (3 Units) will study Paper II and III

Semester End Theory Examination Question Paper Pattern:

Q.1 – Four (4) Long Answer Questions on Unit – I out of which Two (2) to be solved.  
Q.2 – Four (4) Long Answer Questions on Unit – II out of which Two (2) to be solved.  
Q.3 – Four (4) Long Answer Questions on Unit – III out of which Two (2) to be solved.  
Q.4 – Four (4) Long Answer Questions on Unit – IV out of which Two (2) to be solved.  
Q.5 – Six (6) Short Answer Questions on all four (4) Units out of which Four (4) to be solved.

10 Marks Each  
10 Marks Each  
10 Marks Each  
10 Marks Each  
05 Marks Each

Note:

1. Minimum Marks of 20 are required in Every Practical Paper Examination in each semester.
2. A minimum of four field excursions (with at least one beyond the limits of Mumbai / Local area) for habitat studies are compulsory. Field work of not less than eight hours duration is equivalent to one period per week for a batch of fifteen students.
3. A candidate will be allowed to appear for the practical examinations only if he/she submits a certified journal of T.Y.B.Sc. Botany and the Field Report or a certificate from the Head of the Department/Institute to the effect that the candidate has completed the practical course of T.Y.B.Sc. Botany as per the minimum requirements. In case of loss of journal, a candidate must produce a certificate from the Head of the Department/Institute that the practical for the academic year were completed by the student. However, such a candidate will be allowed to appear for the practical examination but the marks allotted for the journal will not be granted.
Q.1 Perform the given Microbiological Experiment ‘A’  
Q.2 Identify, Classify and Describe Specimens B, C and D. Sketch neat and labeled diagrams of Morphological / Microscopical structures seen in the specimens.  
Q.3 Identify and describe slides / specimens E, F and G.  
Q.4 Journal  

KEY:  
A– Any one experiment out of four as prescribed in syllabus.  
B & C– Algae.  
D– Fungi.  
E, F & G– Plant Pathology, Algae or Fungi not asked above in random order.
UNIVERSITY OF MUMBAI
T.Y.B.SC. BOTANY SEMESTER V (USBOP5)
Plant Diversity IV (USBOP502)
Practical Paper – II

Duration: 9:00 am to 01:00 pm
Max. Marks: 50

Q. 1A. Classify specimen ‘A’ up to their families giving reasons. Give floral formula. Sketch neat and labeled L. S. of flower and T.S. ovary.  

Q. 1B. Identify genus and species of specimen ‘B’ using flora.  

Q. 2 Make a temporary double stained preparation of T.S. specimen ‘C’ and comment on the type of secondary growth.  

Q. 3 Perform the Palynology experiment ‘D’ allotted to you.  

Q. 5 Field report  

Q. 6 Viva voce (based on Paper I and Paper II).  

KEY
A– Families of T.Y.B.Sc only  
B– Plants from F.Y & S.Y. B. Sc Families to be included  
C– Anatomy Anomalous Secondary Growth  
D– As per slip  
E, F, G & H– Fossils, Types of Stomata, Morphology of flower & Morphology of Fruits Studied in Theory – in random order
Q. 1 Make a smear preparation of material ‘A’ and show the slide to the Examiner. Comment on your observation / Expose the giant chromosomes from the salivary glands of *Chironomous* larva. 08

Q. 2 Perform the experiment ‘B’ allotted to you (Physiology). 12

Q. 3 Perform the experiment ‘C’ allotted to you (Ecology). 12

Q. 4 Calculate the________of the given solution ‘D’ to prepare the required solution. 07

Q. 5 Identify and describe slide/specimen ‘E’ & ‘F’. 06

Q. 6 Journal. 05

**KEY**

B– Physiology experiment.

C– Ecology experiment.

D– Plant Tissue Culture.

E & F– Multiple shoot culture, Hairy root culture, Somatic embryogenesis, Amino acid sequencing.
Q. 1. Perform the experiment A– growth curve of E.coli / Isolate plasmid DNA and separate using AGE.  

Q. 2. Perform the experiment ‘B’ allotted to you.  

Q. 3. Describe macroscopical /microscopical character with the help of neat and labelled sketches of specimens ‘C’ and ‘D’. Perform the chemical test / TLC to identify the active constituents.  

Q. 4 Identify and explain the specimens/ photographs ‘E’, ‘F’ and ‘G’.  

**KEY**  

B– Experiment based on Beer- Lambert’s Law Experiment on separation of dyes/pigments using silica gel column chromatography  

C & D– Allium sativum, Acorus calamus, Curcuma longa, Senna angustifolia, Strychnos nux-vomica Eugenia caryophyllata  

E, F & G– any stage of mushroom cultivation, any Plant from ethnobotany, problems on restriction mapping
Duration: 9:00 am to 01:00 pm

Q. 1A. Classify specimen ‘A’ up to their families giving reasons. Give floral formula. Sketch neat and labelled L.S. of flower and T.S. of ovary. 10

Q. 1B. Identify genus and species of specimen ‘B’ using flora. 05

Q. 2 Make a temporary double stained preparation of T.S. specimen ‘C’ and comment on the type of secondary growth. 06

Q. 3 Perform the Palynology experiment ‘D’ allotted to you. 07

Q. 5 Field report 05

Q. 6 Journal. 05

KEY

A– Families of T.Y.B.Sc only

B– Plants from F.Y & S.Y. B. Sc Families to be included

C– Anatomy Anomalous Secondary Growth

D– As per slip

E, F, G & H– Fossils, Types of Stomata, Morphology of flower & Morphology of Fruits Studied in Theory – in random order
Q. 1 Make a smear preparation of material ‘A’ and show the slide to the Examiner. Comment on your observation / Expose the giant Chromosomes from the salivary glands of *Chironomous* larva.  

Q. 2 Perform the experiment ‘B’ allotted to you (Physiology).  

Q. 3 Perform the experiment ‘C’ allotted to you (Ecology).  

Q. 4 Calculate the_________ of the given solution ‘D’ to prepare the required solution.  

Q. 5 Identify and describe slide/specimen ‘E’& ‘F’.  

**KEY**

**B**– Physiology experiment.  

**C**– Ecology experiment.  

**D**– Plant Tissue Culture.  

**E & F**– Multiple shoot culture, Hairy root culture, Somatic embryogenesis, Amino acid sequencing.
Q.1 Identify, classify and describe specimen ‘A’ and ‘B’. Sketch neat and labelled diagrams of Morphological/Microscopical structures seen in the specimens. 12

Q.2 Identify, classify and describe specimen ‘C’ and ‘D’. Sketch neat and labeled diagrams of Morphological/Microscopical structures seen in the specimens. 12

Q.3 Identify, classify and describe specimen ‘E’. Sketch neat and labeled diagrams of Morphological/Microscopical structures seen in the specimens. 06

Q.5 Journal. 05

KEY

A & B– Bryophytes: Marchantia, Pellia & Sphagnum

C & D– Pteridophytes: Lycopodium, Equisetum, Adiantum & Marsilea

E– Gymnosperm: Thuja, Gnetum & Ephedra

F, G, H, I & J– Economic importance of Bryophytes, Economic importance of Pteridophytes

Types of Sporophytes in Bryophyta, Types of Sori in Pteridophytes, Soral arrangement in Pteridophytes, Economic importance of Gymnosperms. (In random order)

(USBOP8)
Plant Diversity IV (USBOP602)
Practical Paper – II

Duration: 9:00 am to 01:00 pm
Max. Marks: 50

Q. 1 A. Classify specimen ‘A’ up to its family giving reasons. Give floral formula. Sketch neat and labeled L.S. of flower and T.S. ovary. 08
Q. 1 B. Identify genus and species of specimen ‘B’ using flora. 04
Q. 2 Make a stained preparation of specimen ‘C’ and comment on its ecological anatomy. 06
Q. 3 A Calculate Simpson’s Diversity Index from the given data ‘D’. 08
Q. 3 B Mark the Phytogeographic region ‘E’ in the map of India and Comment on the same. 05
Q. 4 Identify and describe slide/specimen ‘F’, ‘G’ & ‘H’. 09
Q. 5 Field Report. 05
Q. 6 Viva voce (based on Paper I and Paper II) 05

KEY
A– Families of T.Y.B.Sc Sem – VI only
B– Plants from F.Y., S.Y. & T.Y. B. Sc.(Sem – V Families to be included).
C– Ecological anatomy.
F, G & H– Economic importance of specimen from prescribe families (Sem VI only), Morphological Peculiarities of prescribed families (Sem – VI only), Embryology. (In random order)
Q.1 Perform the experiment ‘A’ allotted to you. 10
Q.2 Perform the experiment ‘B’ allotted to you. 10
Q.3 Make a squash preparation to show the stage of mitosis from the pre-treated root tips ‘C’. 05
Q.4 Construct a chromosome map from the given data ‘D’ / Identify the type of mutation and comment on them (any two types of mutations) 10
Q.5 From the given data/ material ‘E’ determine test of significance using students t-test/ Regression Analysis /ANOVA 10
Q.6 Journal. 05

KEY
A– Plant Biochemistry Experiment.
B– Plant Physiology Experiment.
UNIVERSITY OF MUMBAI
T.Y.B.Sc. BOTANY SEMESTER VI (USBOP9)
CURRENT TRENDS IN PLANT SCIENCE II (USBOP604)
PRACTICAL IV

Duration: 9:00 am to 01:00 pm
Max. Marks: 50

Q.1 Perform the DNA barcoding of plant material using given data ‘A’. 12

OR

Perform DNA sequencing by Sanger’s method of the given sequence ‘A’. 12

Q.3 Perform the experiment ‘B’ allotted to you. 12

Q.4 Perform the given analysis of data ‘C’ using computer (Bioinformatics). 08

Q.5 Prepare the squash/Jam/jelly/pickle from the given material ‘D’. 12

Q.6 Viva voce. (Based on Paper III and Paper IV) 06

KEY
B– TLC of Patchouli or Citronella / Saponification value
C– BLAST / Multiple Sequence Alignment (MSA) / Phylogenetic Analysis / RASMOL / SPDBV
Q. 1A. Classify specimen ‘A’ up to its family giving reasons. Give floral formula. Sketch neat and labeled L.S. of flower and T.S. ovary. 08

Q. 1.B. Identify genus and species of specimen ‘B’ using flora. 04

Q. 2 Make a stained preparation of specimen ‘C’ and comment on its ecological anatomy. 06

Q. 3.A Calculate Simpson’s Diversity Index from the given data ‘D’. 08

Q. 3.B Mark the Phytogeographic region ‘E’ in the map of India and Comment on the same. 05

Q. 4 Identify and describe slide/specimen ‘F’, ‘G’ & ‘H’. 09

Q. 5 Field Report. 05

Q. 6 Journal 05

KEY

A– Families of T.Y.B.Sc Sem – VI only

B– Plants from F.Y., S.Y. & T.Y. B. Sc.(Sem – V Families to be included).

C– Ecological anatomy.

F, G & H– Economic importance of specimen from prescribe families (Sem VI only), Morphological Peculiarities of prescribed families (Sem – VI only), Embryology. (In random order)
Q.1 Perform the experiment ‘A’ allotted to you. 10
Q.2 Perform the experiment ‘B’ allotted to you. 10
Q.3 Make a squash preparation to show the stage of mitosis from the pre-treated root tips ‘C’. 06
Q.4 Construct a chromosome map from the given data ‘D’/ Identify the type of mutation and comment on them (any two types of mutations) 10
