Semester-I

Paper-I (Physical and Inorganic Chemistry)
Course Code: CH23101MM

Learning objectives:
The learner to be imparted with:

1) Knowledge of Thermodynamics, the terms involved, First Law of Thermodynamics.
2) Understanding chemical calculations.
3) Fundamentals of Chemical Kinetics.
4) Various features of Liquid state of matter.
5) Detailed study of Atomic Structure and periodicity of elements

Learning Outcomes:
On successful completion of this course students will be able to:

1) Explain the concept of Thermodynamics, explain First Law of Thermodynamics.
2) Distinguish between various types of systems, surroundings etc.
3) Understand the concept of Mole concept and carry out all related calculations.
4) Understand Chemical Kinetics, rate of reactions, order of reactions and solve numerical problems.
5) Explain the nuance of Surface tension, Viscosity, Refractive index.
6) Understand Atomic Structure and correlate the changes in periodic properties of elements.

<td>[5L]</td>
</tr>
<tr>
<td></td>
<td><strong>2.2 Liquid State</strong>&lt;br&gt;&lt;br&gt;Surface tension: Introduction, method of determination of surface tension by drop number method (<strong>Numericals expected</strong>)&lt;br&gt;&lt;br&gt;Viscosity: Introduction, coefficient of viscosity, relative</td>
<td>[5L]</td>
</tr>
</tbody>
</table>
viscosity, specific viscosity, reduced viscosity, determination of viscosity by Ostwald viscometer **(Numericals expected)**

Refractive index: Introduction, molar refraction and polarizability, determination of refractive index by Abbe’s refractometer **(Numericals expected)**

### III

#### 3.1 Atomic structure:

(Qualitative treatment only; it is expected that the learner knows the mathematical statements and understands their physical significance after completing this topic. No derivations of the mathematical equations required)

a) Historical perspectives of the atomic structure; Rutherford’s Atomic Model, Bohr’s theory, its limitations and atomic spectrum of hydrogen atom. Structure of hydrogen atom.

b) Hydrogenic atoms:

1. Atomic orbitals
   - Hydrogenic energy levels
   - Shells, subshells and orbitals
   - Electron spin
   - Radial shapes of orbitals
2. Many Electrons Atoms
   - Penetration and shielding
   - Effective nuclear charge
3. Aufbau principle

#### 3.2: Periodic Table and periodicity:

long form of Periodic Table; Classification for elements as main group, transition and inner transition elements; Periodicity in the following properties: Atomic and ionic size; electron gain enthalpy; ionization enthalpy, effective nuclear charge (Slater’s rule);
Electronegativity; Pauling.

**Justification:** Some of the topics like angular shape of orbitals are already studies in lower class. Some topics will be learned in higher classes. Some are job-oriented topics can be useful in industries.

**Learners Space:**

1. Thermodynamic processes.
2. Rate of reaction of various types of reactions.
4. Applications of Surface Tension, Viscosity, refractive index.
5. Derivations of the mathematical equations for various models of Atomic Structures.

**References:**

Units I & II
13. Chemical Kinetics and Reaction Dynamics, Santosh K. Upadhyay
Unit III

Paper-II (Organic and Inorganic Chemistry)

Course Code: CH23102MM

Learning Objectives:

The learner to be imparted with:

1) Classification and Nomenclature of organic compounds.
2) Fundamentals of organic reaction mechanism.
3) Knowledge of Stereo-isomers of organic molecules.
4) Comparative study of group I and II elements and some important inorganic compounds.

Learning Outcomes:

On successful completion of this course students will be able to:

1) Explain the IUPAC rules and write the names of organic molecules.
2) Understand various intricacies of organic reaction mechanism.
3) Identify stereo-isomers of various organic molecules.
4) Differentiate the elements on the basis of their properties. Visualize the use different compounds.

<tr>
<td>I</td>
<td>Basics of Organic Chemistry</td>
<td>[5L]</td>
</tr>
<tr>
<td></td>
<td>1.1 Classification and Nomenclature of Organic Compounds</td>
<td></td>
</tr>
</tbody>
</table>
| Review of basic rules of IUPAC nomenclature. Nomenclature of mono and bi-functional aliphatic compounds on the basis of priority order of the following classes of compounds: alkanes, alkenes, alkynes, haloalkanes, alcohols, ethers, aldehydes, ketones, carboxylic acids, carboxylic acid derivatives (acid halides, esters, anhydrides, amides), nitro compounds, nitriles and amines; including their cyclic analogues.  
1.2 Fundamentals of organic reaction mechanism:  
Bond fission: Homolytic and Heterolytic fission with suitable examples. Electrophiles and Nucleophiles; Nucleophilicity and basicity  
Types (primary, secondary, tertiary, allyl, benzyl), shape and their relative stability of reactive intermediates: Carbocations, Carbanions and Free radicals.  
Introduction to types of organic reactions: Addition, Elimination and Substitution reaction. (With one example of each) |
|---|---|---|
| II | 2. Stereochemistry I  
Fischer Projection, Newman and Sawhorse Projection formulae (of erythro, threo isomers of tartaric acid and 2,3-dichlorobutane) and their interconversions.  
Relative and absolute configuration: D/L and R/S designations.  
Conformation analysis of alkanes (ethane, propane and n-butane): Relative stability with energy diagrams. |
| III | 3.0 Comparative chemistry of Main Group Elements:  
Metallic and non-metallic nature, oxidation states, electronegativity, anomalous behavior of second period elements, |
allotropy, catenation, diagonal relationship of Group I and Group II elements. Some important compounds- NaHCO₃, Na₂CO₃, NaCl, NaOH, CaO, CaCO₃; oxides of carbon, oxides and oxyacids of sulphur and nitrogen with respect to environmental aspects.

**Justification:**

Some of the topics like angular shape of orbitals are already studies in lowers class. Some topics will be learned in higher classes. Some are job-oriented topics can be useful in industries.

**Learners Space:**

1) Understand IUPAC rules for naming organic molecules containing 3-4 functional groups.
2) Study various reaction mechanisms.
3) Various intricacies of isomerism and reactions.
4) Industrial preparation of the compounds studied.

**References:**

3) Finar, I. L. Organic Chemistry (Volume 2: Stereochemistry and the Chemistry of Natural Products), Dorling Kindersley (India) Pvt Ltd. (Pearson Education).

**Unit III**

General Chemistry Practical-I

Course Code: CH23103MM

Learning Objectives:
The learner will be imparted with
1. Ability to perform time-oriented experiments like Kinetics.
2. Knowledge of Lab to Industry experimentations, commercial analysis.
3. Knowhow to analyze organic compounds in wet Labs with emphasis on microscale technique form an early age.

Learning outcomes:
On completion of these experimentations, the learner will be able to
1. Perform time-oriented experiments.
2. Understand Lab to Industry journey in experimentations.
3. Use microscale techniques.
4. Understand the nuance of quantitative experiments.

1. Chemical Kinetics

(1) To prepare 0.1 N succinic acid and standardize NaOH solution of two different concentrations.

(2) To determine the rate constant for the hydrolysis of ester using HCl as a catalyst.

(3) To determine enthalpy of dissolution of salt (like KNO₃).
2. Commercial Analysis

Commercial Analysis of:

a) To determine the strength of commercial sample of hydrochloric acid.

b) To determine the strength of acetic acid – an organic acid by titrimetric method.

c) To determine the strength of salt of weak acid and strong base.

3. Titrimetric/volumetric analysis:

To analyze the solution of Na$_2$CO$_3$ and NaHCO$_3$ using double indicator.

4. Gravimetric analysis:

1. To determine the percentage purity of sample of BaSO$_4$ containing NH$_4$Cl.

2. To determine percentage purity of sample of ZnO containing ZnCO$_3$.

5. Demonstration Experiment:

Colorimetry: To determine the concentration of given sample of KMnO$_4$ by colorimetric method.

Chromatography: Separation of a mixture of two sugars by ascending paper chromatography.

6. Analytical tools.

Skill Based Practical -I (VSC)

Course Code: CH23105VS

1. Characterization of organic compounds: Characterization of organic compound containing C, H, (O), N, S, X elements. (Minimum of ten compounds having not more than one functional to be analyzed using microscale technique.)

2. Demonstration Experiment:

Potentiometry: Standardisation of Potentiometer and determination of e.m.f.
3. Calculations for preparation of chemical solutions.

Reference Books for Practicals:

Metallurgy (IKS)

Course Code: CH23106IK

Learning objectives:
The learner to be imparted with:

1) Knowledge of Metals, ores, minerals.

2) Understanding calcination, roasting, smelting process.

3) Various purification techniques.

4) Detailed study of silver and nickel metallurgy.

Learning Outcomes:
On successful completion of this course students will be able to:

1) Explain the concept of metallurgy.

2) Various types of metallurgy.

3) Detailed process of extraction of metal.

4) Explain silver and nickel metallurgy.

Sem-II

Paper-I (Physical and Inorganic Chemistry)

Course Code: CH23201MM

Learning Objectives:

The learner will be imparted with

1. Different Gas Laws, derivation of such Laws and solving numerical problems.
2. Understanding of second law of thermodynamics.
3. Knowledge of Ionic equilibria and concept of Buffer.
4. Understanding of Molecular Spectroscopy on the basis of Electromagnetic radiation.
5. Detailed study of Concept of Qualitative Analysis, common ion effect and acid-base theories.

**Learning outcomes:**

On successful completion of this course students will be able to

1. Explain different Gas Laws, derive relations between them and solve numerical problems.
2. Explain equilibrium constants and understand second law of thermodynamics.
4. Understand fundamentals of molecular spectroscopy, electromagnetic radiation.
5. Apply common ion effect, explain precipitation, acid-base theories, distinguish between hard and soft acids and use these for understanding reactions.

<td>[7L]</td>
</tr>
</tbody>
</table>
Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, ionization constant and ionic product of water, ionization of weak acids and bases, pH scale, common ion effect, dissociation constants of mono-, di- and triprotic acid (exact treatment for monoprotic acid)

Buffers: Introduction, types of buffers, derivation of Henderson equation for acidic and basic buffers, buffer action, buffer capacity (Numericals expected)

**2.2 Molecular Spectroscopy:**
Electromagnetic radiation, electromagnetic spectrum, Planck’s equation, interaction of electromagnetic radiation with matter: Absorption, emission, scattering, fluorescence, electronic, vibrational and rotational transitions.

### III 3.1 Acid Base Theories:
Arrhenius, Lowry-Bronsted, Lewis, Solvent – Solute concept of acids and bases, Hard and Soft acids and bases. Applications of HSAB

Applications of acid base chemistry in:
1. Understanding organic reactions like Friedel Craft’s (acylation/alkylation) reaction
2. Volumetric analysis with special reference to calculation of titration curve involving strong acid and strong base.

### III 3.2 Concept of Qualitative Analysis:
Testing of Gaseous Evolutes, Role of Papers impregnated with Reagents in qualitative analysis (with reference to papers impregnated with starch iodide, potassium dichromate, lead acetate, dimethylglyoxime and oxime reagents).

### Learners Space:
1. Ideal gases, Real Gases. Deviation in behavior.
2. Various use of Ionic equilibria, common ion effect, precipitation techniques used in
Industry.
3. Use of different types of Molecular spectroscopy.
4. Various reagents in qualitative analysis.

References:
Units I & II

Unit III
Learning Objectives:

The learner will be imparted with

1. Various properties and reactions of alkanes, alkenes and alkynes.
2. Cycloalkanes, their relative stability and conformational analysis.
3. Aromaticity, Hückel’s rule, different reactions of aromatic compounds.
4. Different types of chemical bond, theories and their limitations.
5. Various aspects of Redox reactions.

Learning outcomes:

On successful completion of this course students will be able to

1. Distinguish between carbon-carbon single bond, double bond and triple bond compounds.
2. Explain identify reactions of alkanes, alkenes and alkynes.
3. Understand the reasons behind the stability of cycloalkanes and explain their conformations.
4. Understand aromaticity and write and explain reactions of aromatic compounds.
5. Distinguish between different types of bonds, theories behind their formation and drawbacks.
6. Write and balance redox reactions.

</tbody>
</table>
Reactions of alkenes: Mechanism of oxymercuration-demercuration, hydroboration-oxidation, ozonolysis, reduction (catalytic and chemical), syn and anti-hydroxylation (oxidation). 1, 2-and 1, 4-addition reactions in conjugated dienes.

Reactions of alkynes: Acidity, Electrophilic and Nucleophilic additions. Hydration to form carbonyl compounds, Alkylation of terminal alkynes.

II 2.1 Stereochemistry-II: Cycloalkanes and Conformational Analysis:
Types of cycloalkanes and their relative stability, Baeyer strain theory, Conformation analysis of cyclohexane: Chair, Boat and Twist boat forms; Relative stability with energy.

2.2 Aromatic Hydrocarbons:
Aromaticity: Hückel’s rule anti-aromaticity, aromatic character of arenes, cyclic carbocations/carbanions and heterocyclic compounds with suitable examples. Electrophilic aromatic substitution: halogenation, nitration, sulphonation and Friedel-Craft alkylation/acylation with their mechanism.

III 3.1: Chemical Bond and Reactivity:
Types of chemical bond, comparison between ionic and covalent bonds, polarizability (Fajan’s Rule), shapes of molecules, Lewis dot structure, Sidgwick Powell Theory, basic VSEPR theory for ABₙ type molecules with and without lone pair of electrons, isoelectronic principles, applications and limitations of VSEPR theory.

3.2: Oxidation Reduction Chemistry:
a) Reduction potentials
b) Redox potentials: half reactions; balancing redox equations.
Learners Space:

1. Structure, reactions and mechanism of cycloalkanes and cycloalkenes.
2. Conformation analysis of different cycloalkanes.
3. Aromaticity in fused heterocyclic compounds.
4. Molecular orbital theory.
5. Use of redox reactions in Industry.

References:

Unit I & II
2. Finar, I. L. Organic Chemistry (Volume 1), Dorling Kindersley (India) Pvt Ltd. (Pearson Education).
3. Finar, I. L. Organic Chemistry (Volume 2: Stereochemistry and the Chemistry of Natural Products), Dorling Kindersley (India) Pvt Ltd. (Pearson Education).

Unit III
Learning Objectives:
The learner will be imparted with
1. Additional time bound reaction abilities.
2. Knowledge of MSDS
3. Intricacies of semi-micro qualitative analysis of inorganic ions.
4. Knowledge of crystallization of organic compounds.
5. Information on TLC
6. Technique of performing redox titration (quantitatively).

Learning outcomes:
On completion of these experimentations, the learner will be able to
1. Carry out Kinetics experiments with greater ease.
2. Write MSDS of compounds.
3. Analyze and determine different inorganic ions.
4. Perform redox titrations.

1. Chemical Kinetics:
   (1) Determine the rate constant for saponification reaction between ethyl acetate and NaOH.
   (2) Determine the rate constant for saponification reaction between methyl acetate and NaOH.

2. Analysis of commercial samples:
   1) To standardize commercial sample of HCl using borax.
   2) Write material safety data sheets (MSDS) of chemicals involved.

3. Volumetric analysis/redox titration:
   1) To determine the percentage of Copper (II) present in the given copper sulphate solution by iodometric titration.
   2) To determine the percentage of Iron (II) present in the given ferrous sulphate solution by redox titration.
4. Demonstration Experiment:

1. Spectrophotometry:
   To determine the concentration of given sample of KMnO₄ spectrophotometrically.

2. pHmetry:
   To determine the pH of given buffer solution by using pH meter.

3. Chromatography: Separation of a mixture of o-and p-nitrophenols by thin layer chromatography (TLC).

4. Molecular models: Displaying the shapes of molecules and ions using models.

5. Aquaintance with Safety Measures in a Laboratory.

6. Water analysis:
   To determine the acidity of given water sample solution.

7. Inorganic preparation:
   Preparation of copper sulphate pentahydrate crystals from copper oxide.

**Skill Based Practical -II (VSC)**

**Course Code: CH23205VS**

1. Semi-micro qualitative analysis:

   Qualitative analysis: (at least 5 mixtures to be analyzed)
   Semi-micro inorganic qualitative analysis of a sample containing two cations and two anions.
   Cations (from amongst): Pb²⁺, Ba²⁺, Ca²⁺, Sr²⁺, Cu²⁺, Cd²⁺, Fe²⁺, Ni²⁺, Mn²⁺, Mg²⁺, Al³⁺, Cr³⁺, K⁺, NH₄⁺
   Anions (from amongst): CO₃²⁻, S²⁻, SO₃²⁻, NO₂⁻, NO₃⁻, Cl⁻, Br⁻, I⁻, SO₄²⁻, PO₄³⁻.
   (Scheme of analysis should avoid use of sulphide ion in any form for precipitation / separation of cations. Mixtures should contain no interfering radicals and not forming insoluble residue)

2. Purification of organic compounds by recrystallization:
   Purification of any five organic compounds by recrystallization selecting suitable solvent.
   (Provide 1g of sample).
Learners are expected to report a) Solvent for recrystallization. b) Mass and the melting points of purified compound.

3. **Conductometry**: To determine the conductivity of given solution.

4. **Complexometric titration**: Estimation of Total Hardness of given water sample.

Chemistry is necessarily an experimental science: its conclusions are drawn from data, and its principles supported by evidence from facts.

MICHAEL FARADAY

Every aspect of the world today – even politics and international relations – is affected by Chemistry.

LINUS PAULING

The curiosity of humans has driven them to explore the world. Manipulation of nature for the benefit of humans has become an objective of exploration. The exploratory activities of human beings have resulted in the accumulation of a vast source of knowledge called natural science. This knowledge is organized in several disciplines for the convenience of study and is based on inquiry, observations and logical extensions, and is testable by experiment or has logically convincing explanation. Science is a domain of inquiry born out of natural curiosity, logical reasoning and experimentation. Chemistry is one of the main core subjects of science.
F.Y.B.Sc being the entry point for the students to undergraduate classes, acts like a guiding force to make up their mind in selecting a subject, they would wish to pursue their studies in future for carving their career in a particular field.

The syllabus committee in the subject of Chemistry for F.Y. B.Sc. has designed the syllabus in such manner that it enhances the effectiveness, excellence, diversity and creativity in the area of teaching-learning of Chemistry. The committee have tried to provide learner with some basic ideas and strategies to help learner in the development of concepts of Chemistry. It is intend to encourage teacher and learner to organize learner-centered, activity-based, participatory learning experiences through observation, dialogue, discussion, projects, problem solving and field work/research laboratory visit to integrate the learning of Chemistry with its content and process. Learners are encouraged to ask questions not only during transaction of a concept but also when involved in any teaching-learning experience so that learners get motivated to talk over the issue. This syllabus meant not only to be read, but to be engaged with and involvement in thinking critically. Relevance, Individualization, Feedback, Reinforcement, Facilitation are considered while framing the syllabus.

The content in this syllabus is divided in two papers per semester. In both the semesters parts of Physical Chemistry and Inorganic Chemistry are covered in paper-I while Organic Chemistry and Inorganic Chemistry are covered in paper-II. An added dimension to the syllabus is the non-binding *Learners Space*. It is included to lure the learner to think at a higher level and do things differently, remaining a few yards ahead.

The use of 5E Learning Model i.e. Engage, Explore, Explain, Elaborate and Evaluate makes teaching-learning and evaluation effective. The outcome of the syllabus is to develop learner’s Critical thinking, Logical thinking, Scepticism and increase the Knowledge Dimension which includes Factual knowledge, Conceptual knowledge, Procedural knowledge and Metacognitive knowledge.

Job oriented/ Entrepreneurship development.

Basis of organic reaction mechanism could be applicable in industries for organic synthesis.
Spectroscopy techniques could be applied for spectral analysis.

</table>

Practical examination of each paper for 100 marks will be held in two sessions. Students will have to perform two experiments in two sessions. Each session will be three and half hours. Students will have to perform the necessary experiments in each semester and all experiments should be reported in journal.

**EXAMINATION PATTERN FOR OE, AEC, VEC, IKS, CC:**

External Exam: 30 marks

Internal Exam: 20 marks

**External Exam Paper Pattern**

Total marks: 50

Duration: 1 hr.

**Passing Standard:**

1. The student will have to secure a minimum of 40% marks in internal assessment as well as semester end examination per theory paper, for all the theory papers.

2. The college will conduct all the semester examinations of 100 marks per practical paper at the end of each semester. The student will have to secure a minimum of 40% marks in the examination per practical paper, for all the above practical papers.
